

Drilling at Condor's Pucamayo West Project intersects 340g/t Ag over 2.2m, including 548g/t Ag, 0.72g/t Au, 2.50% Cu, 2.01% Pb and 2.18% Zn over 1.2m

Vancouver, B.C., May 25, 2011 – Condor Resources Inc. - (“Condor” or the “Company”) (TSXV: CN) is pleased to announce results from its first phase 1,200 metre diamond drilling program at the Pucamayo West silver-gold property, Peru. This was the first drilling program ever conducted on the property. The results of the program are set out below. Diamond drill hole PUC-004 has returned values of 340.9g/t Ag, 0.62g/t Au, 1.80% Cu, 1.77% Pb and 2.27% Zn over 2.2m from 80m to 82.2m depth, including 548.0g/t Ag, 0.72g/t Au, 2.5% Cu, 2.01% Pb and 2.18% Zn over 1.2m from 81 to 82.2m depth.

Additional drill intercepts within the low to intermediate sulphidation multiphase vein system at Pucamayo West returned highs of 1.58g/t Au, 3.3% Pb and 3.5% Zn along with associated highly anomalous silver values. The majority of the drill holes successfully intersected the quartz-carbonate veins surrounded on the hangingwall and footwall by brecciated quartz or ‘crackle breccia’, particularly in the case of the main NW-SE trending, steeply dipping structure. Mineralization at Pucamayo West remains open along strike and at depth. For drill hole locations, see www.condorresources.com/s/ProjectMaps.asp?ReportID=416365

PUCAMAYO WEST DRILL HOLE RESULTS

Hole	From (m)	To (m)	Length (m)	Ag g/t	Ag Oz/T	Au g/t	Cu %	Pb %	Zn %
PUC-001									
	100	101	1	11.1 g/t	0.36	0.1 g/t		1.18%	2.17%
PUC-002	no significant	results							
PUC-003									
	37	40	3	44.2 g/t	1.42	0.44 g/t	0.35%	0.99%	2.10%
<i>Includes</i>	39	40	1	62.4 g/t	2.01	0.38 g/t	0.55%	1.69%	2.49%
	42	43	1	28.7 g/t	0.92		0.21%	0.92%	1.88%
PUC-004									
	80	82.2	2.2	340.9 g/t	10.96	0.62 g/t	1.80%	1.77%	2.27%
<i>Includes</i>	81	82.2	1.2	548.0 g/t	17.62	0.72 g/t	2.50%	2.01%	2.18%
PUC-007									
	26.5	27	0.5	31.5 g/t	1.01	1.58 g/t	0.28%	3.30%	3.50%

Hole	From (m)	To (m)	Length (m)	Ag g/t	Ag Oz/T	Au g/t	Cu %	Pb %	Zn %
PUC-008	22.7	23	0.3	5.7 g/t	0.18	1.55 g/t			0.28%
PUC-009	55.9	56.5	0.6	50.2 g/t	1.61		0.17%	0.26%	0.84%
PUC-010	92	94	2	4.0 g/t	0.13	0.75 g/t		0.39%	0.27%
PUC-011	24.1	24.2	0.1	28.2 g/t	0.91			4.19%	1.50%

Approximately 30% of the proposed 3,000m drill program at Pucamayo has been completed to date and additional geophysics and drilling are being planned for Pucamayo West, as well as eventual drilling of the Pucamayo East high sulphidation hydrothermal breccia target. (Refer also to Condor's January 5th, 2010 and April 8th, 2010 news releases).

One objective of additional geophysics at Pucamayo West will be to provide data at the projected intersection of several mineralized veins, including the main NW-SE mineralized structure and the NNE vein (which returned values to 86.6g/t Au over 3m) where earlier geophysics suggested the existence of a potentially large high chargeability anomaly at depth.

The Pucamayo project is located within a Tertiary volcanic belt which is host to the majority of epithermal precious metals deposits in the Central Andes of Peru.

Condor Resources Inc. was incorporated in 2003 by field exploration specialists focused on the generation of gold and copper projects in South America, where management has extensive experience and a proven track record of discovery. The Company's long term objective is the discovery of a major new gold and/or base metal deposit, and its business plan offers shareholders access to an exciting and growing portfolio of discovery stage properties, including six 100% owned projects in Chile, and seven projects in Peru, each offering a unique path to discovery.

ON BEHALF OF THE BOARD

Patrick J. Burns,
President & Chief Executive Officer
